NANGILI CHANDRA SEKHAR

SDM Deployment Engineer | Telecom Core Network Operations

+91 7075007750 | chandrasekharnangili@gmail.com | LinkedIn Profile

PROFESSIONAL SUMMARY

Telecom Network Operations Engineer with 2 years and 4 months of experience supporting production telecom core networks for Rakuten Mobile through Tech Mahindra. Experienced in IMS/EPC operations, SDM-related network functions, Kubernetes-based CNF/VNF environments, deployment support, change execution, and production troubleshooting. Knowledge of SDM components including HSS/HLR, UDM, AUSF, SDL, EIR, and One NDS, along with IMS/VoLTE call flows and telecom signaling protocols. Experienced in executing approved MOP/RMOP, performing pre-change and post-change health checks, supporting vendor patching and upgrades, monitoring alarms and KPIs, and validating services following change activities. Familiar with Linux CLI, Kubernetes pod-level troubleshooting, protocol-trace analysis, ITSM incident management, and coordination with L2/L3 and vendor teams. Focused on supporting SDM deployment, integration readiness, change execution, and end-to-end service validation in telecom core environments.

TECHNICAL SKILLS

SDM / Telecom Core: SDM, HSS, HLR, UDM, AUSF, SDL, EIR, One NDS, IMS, EPC, VoLTE, 4G/5G Core Concepts, International Roaming, SBC, DRA, STP, P-CSCF, S-CSCF, I-CSCF, PGW, SGW, PCRF, DNS, MRF, MGCF, BGCF, MSS, TAS

Deployment & Validation: Deployment Support, Node Health Checks, Service Validation, Pre-Change/Post-Change Validation, ATP (Acceptance Test Procedure), MOP/RMOP Execution, Standard/Normal/Emergency Change Requests, Vendor Patching and Upgrades, Data Migration Support, KPI Verification, Alarm Monitoring

Protocols & Troubleshooting: SIP, Diameter, GTP, S1AP, IMS/VoLTE Call-Flow Analysis, Protocol-Trace Analysis, Packet Captures, CDR Analysis, Transaction Logs, Fault Isolation, Incident Troubleshooting, RCA Support

Cloud-Native & OS: Kubernetes, Docker, OpenShift, CNF, VNF, Pod Monitoring, Pod-Level Troubleshooting, Cloud Infrastructure Operations, Linux CLI, SSH

Tools & Platforms: RADCOM, ForeSight, Wireshark, RCP, WinSCP, Xshell, PuTTY, MobaXterm, JIRA, Inventory, BI Studio, Service Desk, Microsoft Excel

Programming / ITSM: Python, MySQL, Incident Management, Change Management, ITSM Ticket Handling, Incident Escalation, Vendor Coordination, Cross-Functional Collaboration, Shift Handover, Operational Documentation

PROFESSIONAL EXPERIENCE

Tech Mahindra Ltd. | Network Operations Engineer
Client: Rakuten Mobile | June 2024 – Present

Telecom Core Network Operations

- Support day-to-day production telecom core network operations across Nokia and Mavenir network functions and CNF/VNF-based environments.
- Perform node health checks, alarm monitoring, KPI reviews, service checks, and operational validation across IMS/EPC network functions.
- Support operational activities involving HSS, SBC, DRA, STP, P-CSCF, S-CSCF, I-CSCF, PGW, SGW, PCRF, DNS, MRF, MGCF, BGCF, MSS, and TAS.
- Monitor network health and investigate service-related issues to support operational stability and service continuity.
- Support SDM-related operations and troubleshooting involving subscriber data and associated network functions, as applicable to assigned activities.

Deployment, Change Management, Patching & Validation

- Execute approved Standard, Normal, and Emergency Change Requests in accordance with established MOP/RMOP procedures.
- Perform pre-change health checks and post-change service validation to confirm network functionality and operational readiness.
- Verify node health, service status, alarms, and KPIs following planned and emergency change activities.
- Support emergency change activities involving data migration between Kubernetes pods, followed by health and service checks.
- Support Nokia/Mavenir CFX patching and upgrade activities with vendor and L2/L3 teams; perform post-upgrade checks and escalate issues found during maintenance.
- Support deployment-related validation activities to help ensure network services remain operational after changes.

Protocol Analysis & Cloud-Native Operations

- Investigate IMS/VoLTE call-flow issues using RADCOM, ForeSight, Wireshark, RCP, Linux CLI, and WinSCP.
- Analyze SIP, Diameter, GTP, and S1AP traces, transaction logs, packet captures, and CDRs to support fault isolation and incident resolution.
- Support operational monitoring and troubleshooting in Kubernetes-based CNF environments, including pod access, pod-level issue investigation, and service-health validation after changes.

Incident Management & Coordination

- Manage ITSM incidents through initial investigation, categorization, documentation, escalation, status updates, and closure coordination.
- Coordinate with L2/L3 teams, vendors, and cross-functional network operations teams; provide technical observations for troubleshooting and RCA.
- Maintain operational communication and support shift handovers to ensure continuity of network operations.

KEY ROLE-RELEVANT EXPERIENCE

- **SDM knowledge:** Familiar with HSS/HLR, UDM, AUSF, SDL, EIR, and One NDS.
- **Deployment and validation:** MOP/RMOP execution, change support, ATP-related knowledge, pre/post-change checks, alarm verification, service checks, and KPI monitoring.
- **Upgrades and cloud-native operations:** Nokia/Mavenir CFX patching support, Kubernetes-based CNF operations, pod access, monitoring, and troubleshooting.
- **Protocol troubleshooting:** SIP, Diameter, GTP, S1AP, IMS/VoLTE call flows, transaction logs, packet captures, and CDR analysis.

EDUCATION

Sri Venkateshwara Engineering College
Bachelor of Technology (B.Tech), Electronics and Communication Engineering | 2019–2023 | CGPA: 8.22

SOFT SKILLS

Analytical and Troubleshooting Skills | Time Management | Communication | Cross-Functional Coordination | Incident Prioritization

LANGUAGES

English | Telugu | Hindi | Kannada
